

CAMBO

WHERE TRADITION MEETS VISION

CAMBO HD SLR CS CAMERA SUPPORT SYSTEM

The Cambo HD SLR CS Camera Support System is a modular 'rig' designed to support Digital SLR and DV camera systems when shooting High Definition video. All CS systems offer the photographer or videographer support to achieve stable images and precision capture control.

Choosing a Camera Support

The key component in Cambo's CS System is the CS-M1 Camera mount. This component is height adjustable making the system compatible with a wide range of HD SLR and DV cameras. As the CS System is modular you can start by using the CS-CILIX and add components as and when you want, enabling you to custom build the system suitable for you. Or you can select a pre-designed solution from the CS System range. All components are manufactured from high-grade aluminium, which is anodised ensuring a long lasting finish and high durability.

CS-CIRUS

CS-STYX

CS-ERIS KIT

Portable, Adjustable & Stable

There is a choice of 'off the shelf' portable solutions available with greater control of camera positioning with x, y and z axis movements. The CS-STYX, CIRUS and ERIS give greater stability with the Ergonomic Shoulder Pad and optional balanced counter weights for ultimate comfort and control. All models have flexible upgrades offering limitless opportunity, the best in design, stability and comfort.

Modular & Functional

The CS System consists of modular and multifunctional parts and accessories. This enables you to pick and choose what you need and then later add other accessories to your system.

Attaching additional components to your CS System such as lighting units, microphones and monitors is quick and easy. The Bracket System CS-154 has bottom, side and top accessory mountings for use with the CS-CHRONOS professional Cinema rig, CS-ERIS and CS-STYX.

CS-CILIX

In the Studio

The CS-CILIX rig has dual grips for added stability, it has the smallest footprint making it ideal for handheld capture. When combined with a fluid head tripod, Follow Focus Control, CS-30 Loupe and Matte Box kit you have a complete professional studio solution with precision control.

On-location

Of course you don't have to be restricted to using a rig in the studio. By adding the CS-P1 Ergonomic Shoulder Pad and rods to the CS-CILIX you can comfortably shoot on-location. A Loupe is recommended not only to ensure image sharpness and composition but also to prevent glare on the DSLR screen. With Schneider optics and 3x diopter you will be certain to capture ultra sharp images.

Focus Control

The CSMFC-1 is a compact Follow Focus control unit enabling ultra precision focussing. When used with DV cameras with an infinite focus rig you can set the MFC to free rotation, half rotation of rotation stop. The outer ring can be pre-marked to determine your focus points. It's lightweight and can be attached to all of the professional Cambo CS System Supports.

Memory Function

A key feature when using the CS-ERIS and CS-CHRONOS System is the Memory Function. This simplifies the repeat setup process and optimises the position of the camera to the shoulder support. Your rig can easily be packed away time and time again and setup within minutes.

Accessories

To compliment the CS-System there is a comprehensive range of accessories available for every type of shoot setup. Products such as Matte Boxes, Compact and DV camera mounts, Follow Focus Controller, Viewing Loupes, Quick release mounts.

CS-CHRONOS Professional Cinema Rig
